

INTERWOOD FOREST PRODUCTS

A subsidiary of Fritz Kohl Veneer Mill, Karlstadt Germany

"No two trees are alike" ... we're reminded of that oh so common saying every time we sequence a new Ziricote log. Like a diamond valued for its color, cut, clarity, and carat weight, an individual log is valued by its cut, color, size, and figure type.

Ziricote is also called "Mexican Rosewood"

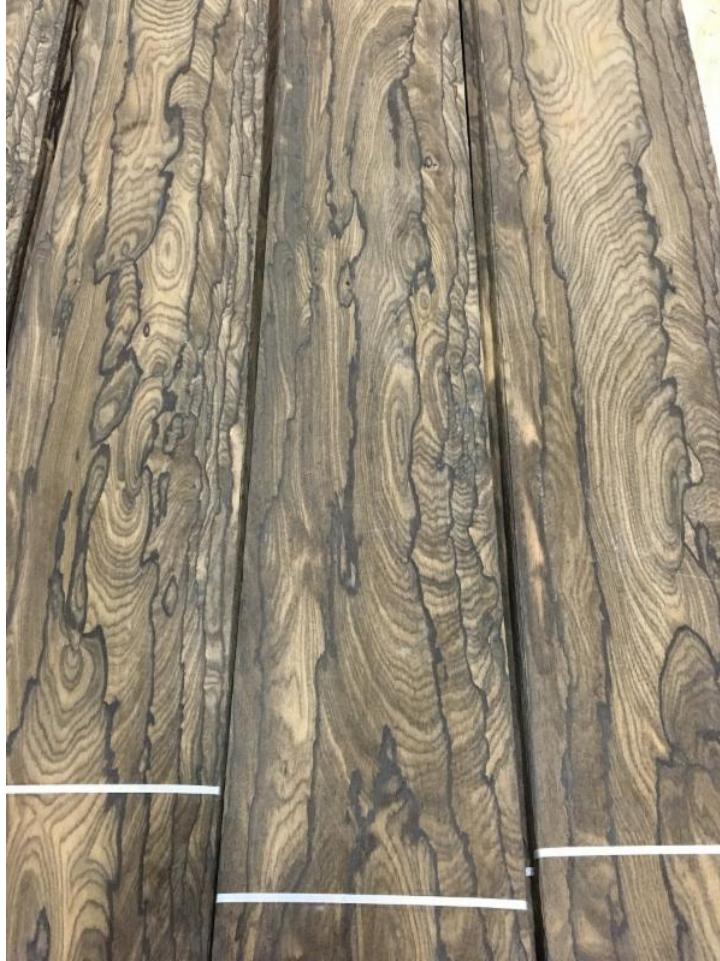

Ziricote, also known as Mexican Rosewood, grows in Central America from Mexico to Columbia and here and there in the southern United States and Brazil. It's a heavy wood but small in diameter making it very dense and difficult to cut through. Trees of usable log lengths more than 3m and 30cm in diameter are extremely rare.

The smaller diameter of the tree means a faster growing sequence

Its grain is visually striking with a white-yellow sapwood and heartwood dark brown with irregular deep black zones. Very decorative when matched to accentuate the sapwood, its intense character makes it preferable for special carvings and high end architectural woodwork.

Book-matching the sapwood creates intense character

Veneer Visions is a quarterly newsletter showing the possibilities using wood veneer. Design concepts include architectural woodwork, luxury interiors, furniture, sustainable sourcing, and much more. Interwood Forest Products was established in 1987 as the US division of Fritz Kohl Veneer Mill in Karlstadt Germany.
